Citrix

Visit: <http://www.pass4sureofficial.com/exams.asp?examcode=1Y0-223>

Pass4sureofficial.com is a reputable IT certification examination guide, study guides and audio exam provider, we not only ensure that you pass your 1Y0-223 exam in first attempt, but also you can get a high score to acquire Citrix certification.

If you use pass4sureofficial 1Y0-223 Certification questions and answers, you will experience actual 1Y0-223 exam questions/answers. We know exactly what is needed and have all the exam preparation material required to pass the exam. Our Citrix exam prep covers over 95% of the questions and answers that may be appeared in your 1Y0-223 exam. Every point from pass4sure 1Y0-223 PDF, 1Y0-223 review will help you take Citrix 1Y0-223 exam much easier and become Citrix certified. All the Questions/Answers are taken from real exams.

Here's what you can expect from the Pass4sureOfficial Citrix 1Y0-223 course:

- * Up-to-Date Citrix 1Y0-223 questions taken from the real exam.
- * 100% correct Citrix 1Y0-223 answers you simply can't find in other 1Y0-223 courses.
- * All of our tests are easy to download. Your file will be saved as a 1Y0-223 PDF.
- * Citrix 1Y0-223 brain dump free content featuring the real 1Y0-223 test questions.

Citrix 1Y0-223 certification exam is of core importance both in your Professional life and Citrix certification path. With Citrix certification you can get a good job easily in the market and get on your path for success. Professionals who passed Citrix 1Y0-223 exam training are an absolute favorite in the industry. You will pass Citrix 1Y0-223 certification test and career opportunities will be open for you.

QUESTION 1

A MetaFrame Presentation Server farm's data store contains several types of "persistent" information about the farm, including which three options? (Choose three)

- A. License file
- B. User profiles
- C. Administrator accounts
- D. Printer drivers and mapping
- E. Published application configuration

Answer: C, D, E

Explanation:

MetaFrame Presentation Server data stores contain the following information:

1. Farm configuration information
2. Published application configurations
3. Server configurations
4. MetaFrame administrator accounts
5. Printer configurations
6. Trust relationships

That makes printer drivers and mappings, published application configurations and Presentation Server administration accounts all persistent data.

Incorrect options:

A: The Data Store holds persistent data and license files are not included. License files are kept on the MetaFrame Access Suite License Server.

B: User Profiles do not resort under persistent data. User profiles are kept locally on the MetaFrame Server - the default location is on the system drive of the MetaFrame Server under "Documents and Settings". User profile configurations can also be kept centrally on a file share as roaming profiles.

QUESTION 2

To perform an unattended installation of MetaFrame Presentation Server and administrator may create an "answer file".

What is an "answer file"?

- A. It is an .EXE file that performs the installation process in default mode.
- B. It is a .TXT file that answers the questions that are asked during setup.
- C. It is a hyperlink that connects the unattended installation to an automated installation enabler on www.MyCitrix.com.
- D. It is a shortcut to a .MST "transform.file" that dynamically interfaces with the

1Y0-223

Windows Installer to complete the installation.

Answer: B

Explanation:

B: The unattended answer file contains selections made by an administrator, usually to standardize and streamline the installation process for large numbers of servers. The path to the answer file is passed as a parameter to the MSI install file for MetaFrame Presentation Server.

Incorrect options:

A: Executable files are programs - they do not contain settings.

C: www.MyCitrix.com is used for managing Citrix licensing and has nothing to do with installation.

D: While MST files can be utilized to make selections for installs, it is not an answer file.

QUESTION 3

What can be used to secure communication between Web interface and the server running MetaFrame Presentation Server?

- A. RC5
- B. SSL Relay
- C. ICA Protocol
- D. Secure Gateway

Answer: B

Explanation:

B: SSL Relay is the transport mechanism for secure communication between the Web Interface and the MetaFrame server. It encrypts information, ensuring that connection information can not be eavesdropped upon. Because the communications are secured using SSL/TLS, not only is the information encrypted, but message integrity checks exist that verify the data transmitted to ensure it has not been tampered with.

Incorrect options:

A. RC5 is a security protocol used in secureICA, which is used between clients and the MetaFrame Server.

C. The ICA protocol is used between clients and the MetaFrame Server for secure client connections.

D. Secure Gateway transparently encrypts and authenticates all user connections to protect against data tampering and theft. It does not operate between the Web Interface and the MetaFrame Presentation Server.

QUESTION 4

An administrator will be using the pass-through client so that users can run the MetaFrame Presentation Server Client for Win32 in the farm to access published applications. The administrator wants to use the Program Neighborhood Agent instead of the Program Neighborhood Client.

Which action must the administrator take during the installation of the Program Neighborhood Agent Client to ensure that the Clients are able to make connections to the server?

- A. Set the Default setting to Auto.
- B. Configure the fully qualified domain name (FQDN) of the data collector.
- C. Configure the URL of the server running the Web Interface for MetaFrame Presentation Server.
- D. Ensure that SSL/TLS for communication between clients and servers running the Web interface is enabled.

Answer: C

Explanation:

C: The Web Interface address is required as the Program Neighborhood Agent essentially proxies information through the Web Interface, providing clients that are not fully featured the full Presentation Server experience.

Incorrect options:

- A. This is not an option for client connection within the Program Neighborhood Agent install.
- B. A data collector is used to gather information about server load within a zone, and is not a static machine - a zone data collector is elected.
- D. This will provide security in communications, but does not provide the necessary information to make gather application information for pass through clients.

QUESTION 5

In a MetaFrame Presentation Server deployment, a zone data collector _____ by default.

- A. Forwards load updates to the data store.
- B. Retrieved load updates from the data store.
- C. Maintains load information for every server in the farm.

1Y0-223

D. Maintains the load information for only the servers in its zone.

Answer: D

Explanation:

D: In MetaFrame XP, zone data collectors would share load information for their zone with all other zone data collectors in the Farm. In MetaFrame Presentation Server, this has been changed so that only load information is kept on servers within the zone. This was brought in to lower network utilization within large scale MetaFrame environments.

Incorrect options:

A: The zone data collectors are used to manage load - the data store contains static information about the MetaFrame Farm environment.

B: The zone data collectors are used to manage load - the data store contains static information about the MetaFrame Farm environment.

C: Starting with MetaFrame Presentation Server 3.0, load information is no longer shared with other zone data collectors within the farm.

Reference:

Source: MetaFrame Presentation Servers Administrator's Guide p. 32

QUESTION 6

When deciding which kind of database to use as a farm data store, an administrator must consider which three factors? (Choose three)

- A. Number of zones in the farm.
- B. Number of servers in the farm.
- C. Number of applications in the farm.
- D. Number of named users in the farm.
- E. Number of connection licenses in the farm.

Answer: B, C, D

Explanation:

Information is required from the data store continually about the servers, applications and named users within the Farm. As such, it is these factors that need to be taken into account when designing the Farm data store.

Incorrect options:

A: The server load does not depend noticeably on the number of zones in a Farm.

E: Connection licenses are handled by the MetaFrame Access Suite in MetaFrame Presentation Server - the data store now has no license information stored within it.

QUESTION 7

Select the option that best describes the practice and purpose of data store database

1Y0-223

replication.

A. An administrator creates a backup copy of a data store database and stores it offline to provide redundancy of data.

This practice is useful in farms that experience frequent outages.

B. An administrator creates a backup copy of a data store database and stores it online to provide redundancy of data.

This practice is useful in farms that experience frequent outages.

C. An administrator replicates the data store database and stores it on the same server, but in another partition.

This practice is useful in farms that experience frequent machine failures.

D. An administrator replicates the data store database and stores it a separate location to facilitate farm performance.

This practice is useful in farms that traverse high-latency WAN links.

Answer: D

Explanation:

D: When a Farm is spanned over a WAN environment (the MetaFrame servers, not the clients), servers need to continually access the Farm data store. This process can cause unwanted traffic on WAN links and/or slow down MetaFrame activities. A replicated database allows servers to access a local copy of the data store.

Incorrect options:

A. This is a backup of the data store, not replication.

B. This is a backup of the data store, not replication.

C. This is not a useful solution and cannot be utilized by MetaFrame.

QUESTION 8

Certkiller 's IT Manager has deployed MetaFrame Presentation Server 3.0 and plans to implement Secure Gateway and use the features of the translated addressing model.

Which tool can be used to configure the translated addressing setting?

A. The Web Interface Console.

B. Presentation Server Console

C. Secure Ticket Authority Configuration

D. Program Neighborhood Agent Console

E. The Secure Gateway Management Console

Answer: A

Pass4SureOfficial.com Lifetime Membership Features;

- Pass4SureOfficial Lifetime Membership Package includes over **2500** Exams.
- **All** exams Questions and Answers are included in package.
- **All** Audio Guides are included **free** in package.
- **All** Study Guides are included **free** in package.
- **Lifetime** login access.
- Unlimited download, no account expiry, no hidden charges, just one time \$99 payment.
- **Free updates** for Lifetime.
- **Free Download Access** to All new exams added in future.
- Accurate answers with explanations (If applicable).
- Verified answers researched by industry experts.
- Study Material **updated** on regular basis.
- Questions, Answers and Study Guides are downloadable in **PDF** format.
- Audio Exams are downloadable in **MP3** format.
- **No authorization** code required to open exam.
- **Portable** anywhere.
- 100% success **Guarantee**.
- **Fast**, helpful support 24x7.
