

70-401

Microsoft

MS System Center Configuration Manager2007, Configuring

OfficialCerts.com is a reputable IT certification examination guide, study guides and audio exam provider. We ensure that you pass your 70-401 exam in first attempt and also get high scores to acquire Microsoft certification.

If you use OfficialCerts 70-401 Certification questions and answers, you will experience actual 70-401 exam questions/answers. We know exactly what is needed and have all the exam preparation material required to pass the exam. Our Microsoft exam prep covers over 95% of the questions and answers that may be appeared in your 70-401 exam. Every point from pass4sure 70-401 PDF, 70-401 review will help you take Microsoft 70-401 exam much easier and become Microsoft certified.

Here's what you can expect from the OfficialCerts Microsoft 70-401 course:

- * Up-to-Date Microsoft 70-401 questions as experienced in the real exam.*
- * 100% correct Microsoft 70-401 answers you simply can't find in other 70-401 courses.*
- * All of our tests are easy to download. Your file will be saved as a 70-401 PDF.*
- * Microsoft 70-401 brain dump free content featuring the real 70-401 test questions.*

Microsoft 70-401 certification exam is of core importance both in your Professional life and Microsoft certification path. With Microsoft certification you can get a good job easily in the market and get on your path for success. Professionals who passed Microsoft 70-401 exam training are an absolute favorite in the industry. You will pass Microsoft 70-401 certification test and career opportunities will be open for you.

QUESTION: 1

You work as an administrator at ABC.com. The ABC.com network consists of a single Active Directory domain named ABC.com. ABC.com makes use of System Center Configuration Manager 2007 on their network. ABC.com has recently opened a new satellite office in Miami. You have been tasked with making sure that users in the Miami office are able to install operating systems on their workstations using boot images. You decide to modify the settings of the site system in the Configuration Manager to answer requests for boot images from workstations in the Miami office. Which of the following actions should you take?

- A. You should consider creating a new site system, and installing the PXE Boot Service on a DHCP server in ABC.com's environment.
- B. You should consider creating a new site system, and granting it the Fallback status point role.
- C. You should consider creating a new site system, and installing the State Migration Service on a DHCP server in ABC.com's environment.
- D. You should consider creating a new site system, and granting it the PXE Service Point role.

Answer: D

QUESTION: 2

You work as a Configuration Manager 2007 administrator at ABC.com. The ABC.com network consists of a single Active Directory domain named ABC.com. You have received instruction from the CIO to prepare for the deployment of new OS to all workstations on the ABC.com network office. You are then informed that for the boot images to perform adequately, it needs added network drivers. You navigate to the properties of the boot image, and choose the Select a Driver option. When you try to add the required drivers, you notice that there aren't any drivers available. Which two of the following actions should you take?

- A. You should consider importing the relevant drivers into the Drivers node of the Configuration Manager console.
- B. You should consider importing the relevant drivers into the Driver Packages node of the Configuration Manager console.
- C. You should also consider choosing the relevant drivers and adding it in the boot image properties.
- D. You should also consider choosing the relevant package and adding it in the boot image properties.

Answer: A, C

QUESTION: 3

You work as a Configuration Manager 2007 administrator at ABC.com. The ABC.com network consists of a single Active Directory domain named ABC.com. After configuring Network Access Protection (NAP) on ABC.com's network, you are instructed to make sure that users on ABC.com's network are able to access options for remediation in the event of remediation failing. You create a Web site in the restricted network. Which of the following actions should you take?

- A. You should consider having a Web site created in the restricted network.
- B. You should consider having a Web site created in the public network.
- C. You should consider having the Troubleshooting URL setting configured on the network policy for computers that are not compliant.
- D. You should consider having the Troubleshooting URL setting configured on the network policy for computers that are unidentified.

Answer: A, C

QUESTION: 4

You work as a Configuration Manager 2007 administrator at ABC.com. The ABC.com network consists of a single Active Directory domain named ABC.com. You have been tasked with making sure that all workstations on the ABC.com network can be located by which office they reside in. To achieve this, you plan to insert a custom element in the hardware inventory data. Which of the following actions should you take?

- A. You should insert a NOIDMIF file, which hosts the office location data, on each workstation. You should then set up the Configuration Manager 2007 to gather NOIDMIF files from workstations.
- B. You should modify the Configuration.mof file. You should then insert a NOIDMIF file, which hosts the office location data, on each workstation.
- C. You should modify the Configuration.mof file. You should then set up the sms_def.mof file.
- D. You should set up the sms_def.mof file. You should then set up the Configuration Manager 2007 to gather NOIDMIF files from workstations.

Answer: A

QUESTION: 5

You work as an administrator at ABC.com. The ABC.com network consists of a single Active Directory domain named ABC.com. ABC.com makes use of System Center Configuration Manager 2007 on their network. You have recently deployed a custom application to all workstations on the ABC.com network. You are instructed to view the registry values for the new application for all ABC.com workstations. To achieve this, you have to send a query to Configuration Manager 2007 for the relevant information. Which of the following actions should you take?

- A. You should consider configuring hardware inventory, and setting the SMS_Def.MOF file on every site to query for the registry values.
- B. You should insert a NOIDMIF file on each workstation, and set up the Configuration Manager 2007 to gather NOIDMIF files from workstations.
- C. You should consider amending the sitectrl.cto file at the primary site.
- D. You should consider amending the sitectrl.cto file at the secondary site.

Answer: A

QUESTION: 6

You work as an administrator at ABC.com. The ABC.com network consists of a single Active Directory domain named ABC.com. ABC.com makes use of System Center Configuration Manager 2007 on their network. All workstations on the ABC.com network have a custom application, named ABCApp, installed. You have been instructed to monitor the amount of software used by ABCApp. Furthermore, you have to make sure that you are able to achieve this even if the name of the ABCApp executable is changed. You need to achieve this with as little administrative effort as possible. Which of the following actions should you take?

- A. You should consider configuring a software metering rule, and specify the new file name every time that it is changed.
- B. You should consider configuring a software metering rule, and specifying the Original file name for ABCApp.
- C. You should consider having a customized report configured on the Reports node.
- D. You should add all workstations that run ABCApp to a collection, and then configure a configuration baseline that is applied to the collection.

Answer: B

QUESTION: 7

You work as an administrator at ABC.com. The ABC.com network consists of a single Active Directory domain named ABC.com. ABC.com makes use of System Center Configuration Manager 2007 on their network. You have been instructed to make sure that a range of inventoried names for an application named TestApp can be viewed as a single display name in a Resource Explorer. To do this, you have to consolidate the different inventoried names for TestApp. You have verified that the Software Inventory client agent has been enabled. Which of the following actions should you take?

- A. You should consider having the SMSClient.mof file modified.
- B. You should consider configuring the properties of the Software Inventory client agent to assemble several products into one product name.
- C. You should consider having the CollectionSettings.mof file modified.
- D. You should consider configuring the properties of the Software Inventory client agent to have a product name for each and every product.

Answer: B

QUESTION: 8

You work as an administrator at ABC.com. The ABC.com network consists of a single Active Directory domain named ABC.com. ABC.com makes use of System Center Configuration Manager 2007 on their network. System Center Configuration Manager 2007 has been configured to run in mixed mode. The site server, named ABC-SS01, in ABC.com's central site is configured as a device management point. You have recently configured a compulsory task to distribute a software package to portable devices. While performing routine monitoring, you notice the failure of software distribution to portable devices on the LAN. You have to make sure that software can be deployed to portable computers via Configuration Manager 2007. You have confirmed that Internet Information Services (IIS) is running, and that Web Distributed Authoring and Versioning (WebDAV) extensions for IIS has been enabled. Which combination of the following options would allow you to achieve this? (Choose all that apply.)

- A. You should choose the Allow clients to transfer content from this distribution point using BITS, HTTP, and HTTPS option on the General tab of the ConfigMgr distribution point Properties dialog box.
- B. You should deselect the Allow clients to transfer content from this distribution point using BITS, HTTP, and HTTPS option on the General tab of the ConfigMgr distribution point Properties dialog box.
- C. You should deselect the Allow clients to connect anonymously (Required for mobile device clients) option on the General tab of the ConfigMgr distribution point Properties dialog box.
