Question: 1

At which level does an administrator perform the steps:

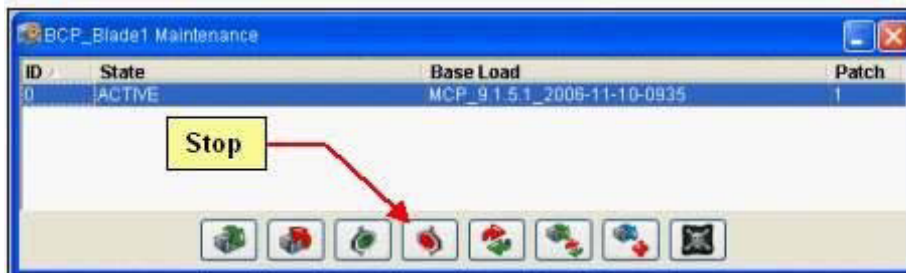

Stop, UnDeploy, Deploy and Start to upgrade a Border Control Point (BCP) series 7000 to a new release?

- A. Network Elements > Media Portals > RTP Portals > (BCP name) > Instance
- B. Network Elements > Media Portals > RTP Portals > (BCP name) > NE Maintenance
- C. Network Elements > Media Portals > Media Portal Cluster > (cluster name) > Service Instances
- D. Network Elements > Media Portals > Media Portal Cluster > (cluster name) > Configuration Parameters

Answer: B

Question: 2

In a 3 + 1 fault tolerant cluster,

Which blade servers must be stopped before upgrading to a new load?

- A. any blade server in the cluster, since it will automatically synchronize the new load from that blade server with all the other blade servers in that cluster.
- B. only the blade servers that are currently carrying active Real-time Transport Protocol (RTP) / media streams.

- C. all blade servers that are in the cluster, which includes the active BCP 7200 blade servers (3), as well as the standby Border Control Point (BCP) 7200 blade server.
- D. only the active (3) blade servers in the cluster. The standby BCP blade server (+ 1) must remain active so that, if a new call is presented to the cluster during the upgrade procedure, the cluster can process it.

Answer: C

Question: 3

In the diagram below,

Which protocol is carried over the "Control Plane" to the Border Control Point?

- A. Real-time Transport Control Protocol (RTCP)
- B. Transmission Control Protocol (TCP)
- C. Media Portal Control Protocol (MPCP)
- D. Real-time Transport Protocol (RTP)

Answer: C

Question: 4

The Border Control Point (BCP) replies to the originating end user with an "alias", how will the end user apply the alias?

- A. The originating end user will change just its source IP address to match the alias IP address returned by the BCP.
- B. The originating end user will change just its destination IP address to match the alias IP address returned by the BCP.
