## Microsoft

### *Implementing and Managing Microsoft Exchange Server 2003*

Visit: <http://www.pass4sureofficial.com/exams.asp?examcode=70-284>

Pass4sureofficial.com is a reputable IT certification examination guide, study guides and audio exam provider, we not only ensure that you pass your 70-284 exam in first attempt, but also you can get a high score to acquire Microsoft certification.

If you use pass4sureofficial 70-284 Certification questions and answers, you will experience actual 70-284 exam questions/answers. We know exactly what is needed and have all the exam preparation material required to pass the exam. Our Microsoft exam prep covers over 95% of the questions and answers that may be appeared in your 70-284 exam. Every point from pass4sure 70-284 PDF, 70-284 review will help you take Microsoft 70-284 exam much easier and become Microsoft certified. All the Questions/Answers are taken from real exams.

Here's what you can expect from the Pass4sureOfficial Microsoft 70-284 course:

- \* Up-to-Date Microsoft 70-284 questions taken from the real exam.
- \* 100% correct Microsoft 70-284 answers you simply can't find in other 70-284 courses.
- \* All of our tests are easy to download. Your file will be saved as a 70-284 PDF.
- \* Microsoft 70-284 brain dump free content featuring the real 70-284 test questions.

Microsoft 70-284 certification exam is of core importance both in your Professional life and Microsoft certification path. With Microsoft certification you can get a good job easily in the market and get on your path for success. Professionals who passed Microsoft 70-284 exam training are an absolute favorite in the industry. You will pass Microsoft 70-284 certification test and career opportunities will be open for you.

**QUESTION: 1**

You work as the Exchange administrator at Companys.com. The Companys.com network consists of a single Active Directory forest named Companys.com. Companys.com has its headquarters in Chicago and a branch office in Miami. All servers on the Companys.com network run Windows Server 2003 and all client computers run Windows XP Professional. Companys.com has additionally configured the headquarters as a forest root domain containing a separate site. The Companys.com branch office as a result was configured as a child domain containing one site. Companys.com has both office sites containing domain controllers configured with the default settings for the domains they are responsible for. You have recently received instruction from the Companys.com network CIO to have a designated network administrator deploy Exchange Server 2003 to both sites whilst ensuring that Active Directory is first prepared prior to the installation of any Exchange servers. What should you do to prepare Active Directory?

- A. You should consider running the DomainPrep program in the Companys.com headquarters. You should then run the ForestPrep program only in the Companys.com branch office
- B. You should consider running the ForestPrep program in the Companys.com headquarters. You should then run the DomainPrep program only in the Companys.com branch office
- C. You should consider running the ForestPrep program in the Companys.com headquarters. You should then run the DomainPrep program in each office
- D. You should consider running the DomainPrep program in the Companys.com headquarters. You should then run the ForestPrep program in each office

**Answer: C**

**Explanation:**

Since there is a designated Exchange administrator the ForestPrep and DomainPrep must be run in the forest root domain and you should then run the DomainPrep program in the child domain. ForestPrep and DomainPrep are run in the root domain because the first domain controller in the domain will be configured as the schema master and global catalog server.

**Incorrect Answer:**

A, B, D: There is no need for you to use this order of configuration because members of the:

- \* Enterprise Admins
- \* Schema Admins
- \* Domain Admins

The Enterprise Admins, Schema Admins groups of the root domain and members of the Domain Admins in both domains will be possible to install Exchange Server. You should then first install Exchange Server 2003 to the forest root domain before you would be able to install Exchange Server 2003 in child domains.

**QUESTION: 2**

You work as the network Exchange administrator at Companys.com. The Companys.com network forest consists of a single Active Directory domain named Companys.com. All servers on the Companys.com network run Windows Server 2003 and all client computers run Windows XP Professional. The Companys.com network contains a member server named Companys -SR07. You have received instruction from the CIO to install the first Exchange Server 2003 server on Companys -SR07. You are required to ensure that the installation of Exchange Server 2003 completes successfully without performing unnecessary actions by selecting which prerequisites are required in order to perform the installation? (Choose TWO.)

- A. Membership to the Domain Admins group is required and the Exchange 2003 ForestPrep program must be run on any server
- B. Promote Companys -SR07 to domain controller and run the Exchange 2003 ForestPrep program on any server
- C. Membership to the Schema Admins and Local Administrators group on Companys -SR07 is required
- D. The DomainPrep program must be run on any server and the ForestPrep program must be run on the schema master
- E. Membership to the Enterprise Admins group is required

**Answer:** C, E

**Explanation:**

Membership to the Enterprise Admins and Schema Admins groups on the forest root and Local Administrators group membership are required if you want to install Exchange 2003 in a forest on a member server. Providing you are a member of the mentioned groups membership to no other groups are required to install Exchange Server 2003.

**Incorrect Answer:**

A, B, D: ForestPrep and DomainPrep are used to prepare Active Directory schema and domain for Exchange Server2003, as you are a member of the Schema Admins, Enterprise Admins groups on the forest root and are a member of the Local Administrators group on Companys -SR07 you will not require running DomainPrep and ForestPrep. As it is a single domain the schema master and global catalog server resides their so there is no need for ForestPrep or DomainPrep.

**QUESTION: 3**

You work as the network Exchange administrator at Companys.com. The Companys.com network consists of a single Active Directory domain named Companys.com. Companys.com has its headquarters in Chicago and a branch office in Dallas. All servers on the Companys.com network run Windows Server 2003 and all client computers run Windows XP Professional. The Companys.com Chicago network contains a domain controller which is

configured to perform all operation master roles and acts as a global catalog server. The Companys.com Dallas network has only one domain controller. You have received instruction from the CIO to implement an Exchange organization. You proceed by running the Exchange Server 2003 setup using the setup /forestprep command and proceed to install Exchange 2003 server on the Chicago domain controller. During the course of the business day you decide to install a second Exchange 2003 server in the Dallas office for future growth, you run the Exchange 2003 server setup using the setup /domainprep on the Dallas domain controller. You run the setup and receive an error message that states: Multiple components cannot be assigned the requested action because the component "Microsoft Exchange Messaging and Collaboration Services" can not be assigned the action "Install" What should you do to continue the installation? (Choose all that apply.)

- A. You should consider running the setup /forestprep command in the Dallas domain
- B. You should consider configuring the domain controller in Dallas as a global catalog server
- C. You should consider having the domain administrator in the Dallas domain perform the installation
- D. You should consider running the setup /domainprep command in the Chicago domain

**Answer:** B, D

**Explanation:**

It is required that the Exchange installation be able to contact the global catalog server when installing, the Dallas office has no capability of contacting the global catalog server in Chicago. The solution to this problem would be to run either setup /domainprep in Chicago domain or the Dallas domain controller should be configured as a global catalog server.

**Incorrect Answer:**

A: There is no need to run the setup /forestprep program in Dallas as this program should be run in the root domain. You are the administrator of the root domain and automatically have membership in the Enterprise Admins group giving you permissions to install Exchange 2003 server.

C: There is no need for the Dallas domain administrator to run the installation as you are the administrator of the root domain and automatically have membership in the Enterprise Admins group giving you permissions to install Exchange 2003 server

**QUESTION:** 4

You work as the Exchange administrator at Companys.com. The Companys.com network consists of a single Active Directory domain named Companys.com. All servers on the Companys.com network run Windows Server 2003. Companys.com has headquarters in London and branch offices in Paris, Berlin, Milan, and Madrid. Management is planning to install Exchange Server 2003 on a single member server in each Companys.com office. HTTPS, WAP devices, MAPI, IMAP, and SMTP/POP3 will be utilized Companys.com users to

connect to the Exchange servers. You have received instruction from the CIO to create a script to automate the installation. The CIO also instructs the IT administrators in each office to prepare the Exchange servers to support the scripted installation. You have to specify any added Windows Server 2003 components that are required. Which of the following are four components that should be specified? (Choose FOUR.)

- A. World Wide Web Service
- B. NNTP service
- C. SMTP service
- D. POP3 service
- E. ASP.NET

**Answer:** A, B, C, E

**Explanation:**

Installing and Enabling Windows 2000 or Windows Server 2003 Services. Exchange 2003 Setup requires that the following components and services be installed and enabled on the server:

- \* .NET Framework
- \* ASP.NET
- \* Internet Information Services (IIS)
- \* World Wide Web Publishing Service
- \* Simple Mail Transfer Protocol (SMTP) service
- \* Network News Transfer Protocol (NNTP) service

If you are installing Exchange 2003 on a server running Windows 2000, Exchange Setup installs and enables the Microsoft.NET Framework and ASP.NET automatically. You must install the World Wide Web Publishing Service, the SMTP service, and the NNTP service manually before running Exchange Server 2003 Installation Wizard. If you are installing Exchange 2003 in a native Windows Server 2003 forest or domain, none of these services is enabled by default. You must enable the services manually before running Exchange Server 2003 Installation Wizard.

**QUESTION: 5**

You work as the Exchange administrator at Companys.com. The Companys.com network consists of a single Active Directory domain named Companys.com. All servers on the Companys.com network run Windows Server 2003. You are planning to install Exchange Server 2003 on a member server named Companys -SR01. You run the setup /forestprep command using a domain user account named ExchAdmin, but receive an error message

stating that the account does not have the necessary permissions to perform this task. You must make sure that you are able to run the `setup /forestprep` command using the ExchAdmin account. Which of the following are the two groups that you should add ExchAdmin to, to achieve your objective? (Choose TWO.)

- A. Administrators on Companys -SR01
- B. Enterprise Admins in the domain
- C. DnsAdmins in the domain
- D. Schema Admins in the domain
- E. Administrators in the domain

**Answer:** B, D

**Explanation:**

ForestPrep extends the Active Directory schema for Exchange Server 2003. You must run ForestPrep in the domain where the schema master resides. To run ForestPrep, your account must be a member of the Enterprise Admins group, and the Schema Admins group.

**QUESTION:** 6

You work as the Exchange administrator at Companys.com. The Companys.com network consists of a single Active Directory forest that contains the forest root domain named Companys.com and one child domain named Companys-north.com. The Companys.com child domain contains user accounts and group accounts. When Management decides to deploy Exchange Server 2003 as the messaging system for the whole of Companys.com, You are asked to prepare the forest to support a new Exchange Server 2003 organization. After Replication has completed normally, you install the first Exchange Server 2003 system in the forest root domain. Which of the following is a task that you should execute to make sure that all user accounts can be mailbox-enabled?

- A. Run the `setup /domainprep` command in the forest root domain.
- B. Run the `setup /domainprep` command in the child domain.
- C. Install Active Directory Connector (ADC) on a domain controller in the forest root domain.
- D. Install Active Connector (ADC) on a domain controller in the child domain.

**Answer:** B

**Explanation:**

## Pass4SureOfficial.com Lifetime Membership Features;

- Pass4SureOfficial Lifetime Membership Package includes over **2500** Exams.
- **All** exams Questions and Answers are included in package.
- **All** Audio Guides are included **free** in package.
- **All** Study Guides are included **free** in package.
- **Lifetime** login access.
- Unlimited download, no account expiry, no hidden charges, just one time \$99 payment.
- **Free updates** for Lifetime.
- **Free Download Access** to All new exams added in future.
- Accurate answers with explanations (If applicable).
- Verified answers researched by industry experts.
- Study Material **updated** on regular basis.
- Questions, Answers and Study Guides are downloadable in **PDF** format.
- Audio Exams are downloadable in **MP3** format.
- **No authorization** code required to open exam.
- **Portable** anywhere.
- 100% success **Guarantee**.
- **Fast**, helpful support 24x7.
